StreamCaster
WEB VIDEO ON YOUR TV

QUICK START

On your TV in 3 steps.

No cable, no app on your phone. The TV shows a code — your phone sends the stream.

1

ON THE TV

Open the browser, enter the address

Fire TV (Silk), Android TV or a smart TV browser. A 6-character code and a QR code appear.

`streamcaster.pages.dev/r`

2

ON YOUR PHONE OR PC

Scan the code — or type it

Scan the QR with your phone camera: the page opens and connects by itself. Or type the code and press **Connect**.

`streamcaster.pages.dev`

3

CAST

Paste a link, send a file, or mirror your screen

The TV switches to "Connected" and starts playing. Volume and pause are yours from the phone or the TV remote.

iPhone / iPad only (AirPlay): install the receiver app on the Fire TV once

1. Install **Downloader** on the Fire TV (Amazon Appstore, free).
2. Enter **streamcaster.pages.dev/apk** in Downloader — allow "apps from unknown sources".
3. Start **StreamCaster Receiver** → the code appears → mirror from the iPhone via AirPlay.

IF SOMETHING IS STUCK

TV waits, nothing happens
Scan the QR again — it connects directly, no typing.

Video won't start
Some sites block third-party players. Use "Browse & cast" in the sender and play it there.

iPhone won't mirror
AirPlay needs the receiver app on the Fire TV (see above).

TV	PHONE / PC	FIRE TV APP (IPHONE)
`streamcaster.pages.dev/r`	`streamcaster.pages.dev`	`streamcaster.pages.dev/apk`

Tip: the code stays valid while your phone steps away — the TV keeps waiting for the next device.
